

## ABSTRAK

### FAKTOR-FAKTOR YANG BERTHUBUNGAN DENGAN PERSEPSI SUAMI DALAM PEMILIHAN KONTRASEPSI VASEKTOMI DI KELURAHAN PULANG PISAU TAHUN 2021

Pembimbing I : Drs. H. Fahrurazi, M.Si., M. Kes  
Pembimbing II : Edy Ariyanto, SKM., M. Kes

Vasektomi (MOP) memiliki proporsi pengguna terendah daripada alat kontrasepsi lainnya berdasarkan jumlah peserta KB aktif. Metode kontrasepsi perempuan yang digunakan jauh lebih besar dibanding dengan metode kontrasepsi laki-laki, ini menunjukkan bahwa partisipasi laki-laki dalam menggunakan alat kontrasepsi masih sangat kecil. Vasektomi merupakan suatu metode kontrasepsi operatif minor pada pria yang sangat aman, sederhana, dan sangat efektif, memakan waktu operasi yang singkat dan tidak memerlukan anestesi umum. Tujuan penelitian ini untuk mengetahui faktor-faktor yang berhubungan dengan persepsi suami dalam pemilihan kontrasepsi vasektomi di Kelurahan Pulang Pisau tahun 2021. Jenis penelitian ini adalah kuantitatif dengan menggunakan desain *cross sectional* dan pengambilan sampel menggunakan teknik *Random Sampling*. Populasi dalam penelitian ini adalah semua pasangan usia subur (PUS) sebanyak 633 dengan jumlah sampel sebanyak 86. Analisis data penelitian menggunakan Uji Chi-Square dengan ( $\alpha = 0,05$ ). Analisis Univariat pada penelitian ini menghasilkan distribusi frekuensi persepsi suami positif 74 responden (86,0 %), pengetahuan suami cukup sebanyak 40 responden (46,5 %), usia suami  $\leq 40$  tahun 47 responden (54,7%), pendapatan keluarga di atas UMK sebanyak 67 responden (77,9%) dan pendidikan suami tingkat menengah 39 responden (45,3 %). Hasil penelitian menunjukkan adanya hubungan antara pengetahuan dengan persepsi suami ( $P\text{-value} = 0,039 < \alpha = 0,05$ ), Sedangkan usia ( $P\text{-value} = 0,971 > \alpha = 0,05$ ) pendapatan ( $P\text{-value} = 0,723 > \alpha = 0,05$ ) dan pendidikan ( $P\text{-value} = 0,443 > \alpha = 0,05$ ) tidak adanya hubungan dengan persepsi suami. Diharapkan suami atau pasangan usia subur (PUS) dapat memperoleh pemahaman yang jelas tentang kontrasepsi vasektomi dan dapat dengan mudah menentukan pilihannya dalam ber-KB, khususnya KB pria.

## ABSTRACT

### FACTORS RELATED TO HUSBAND'S PERCEPTION IN CHOOSING VASECTOMY CONTRACEPTION IN PULANG PISAU VILLAGE IN 2021

**Preceptor I** : Drs. H. Fahrurazi, M.Si., M. Kes

**Preceptor II** : Edy Ariyanto, SKM., M. Kes

Vasectomy (MOP) has a lower proportion of use than other contraceptives based on the number of active family planning participants. The female contraceptive method used is much greater than the male contraceptive method, this shows that the participation of men in using contraceptives is still very small. Vasectomy is a method of minor operative contraception in men that is very safe, simple, and very effective, takes a short operation time and does not require general anesthesia. The purpose of this study was to determine the factors related to the husband's perception of the choice of vasectomy contraception in Pulang Pisau Village in 2021. This type of research is quantitative by using cross-sectional design and sampling using a random sampling technique. The population in this study were all couples of reproductive age or pus as many as 633 with a total sample of 86. Analysis of research data using Chi square test with ( $\alpha = 0,05$ ). Univariate analysis in this study resulted in a frequency distribution of positive husband perceptions of 74 respondents (86.0%), knowing that their husbands were sufficient as many as 40 respondents (46.5%), of Xiaomi's age was less than or equal to 40 years 47 respondents (54.7%) of family income above the minimum wage as much as 67 respondents (77.9%) and husband's education at the secondary level 39 respondents (45.3%). The results showed that there was a relationship between knowledge and husband's perception suami ( $P\text{-value} = 0,039 < \alpha = 0,05$ ), while Viva lu's age is equal to zero, 971 is more Alfa = 0.05 Viva lu's income is equal to 0.723 more Alfa = 0.05 and education is always the same as 0.43 more Alfa = 0.05 there is no relationship with husband's perception. It is hoped that husbands or partners of childbearing age or pus can gain a clear understanding of the perception of vasectomy and can easily make their choices in Family Planning, especially male Family Planning.
