ANALISIS KEJADIAN ISPA PADA BALITA DITINJAU DARI PERILAKU MEROKOK KELUARGA, STATUS GIZI, DAN PEMBERIAN ASI EKSKLUSIF DI PUSKESMAS MARTAPURA 1 TAHUN 2022 ERDI FAZRIYAN ^{1*}, Meilya Farika Indah, SKM., M.SC ², Chandra, SKM., M.Kes ³ ¹Kesehatan Masyarakat, Fakultas Kesehatan Masyarakat, Universitas Islam Kalimantan Muhammad Arsyad Al Banjari, NPM 18070161 ²Kesehatan Masyarakat, Fakultas Kesehatan Masyarakat, Universitas Islam Kalimantan Muhammad Arsyad Al Banjari, NIDN 1124057901 ³Kesehatan Masyarakat, Fakultas Kesehatan Masyarakat, Universitas Islam Kalimantan Muhammad Arsyad Al Banjari, NIDN 1117028902 *E- mail: erdi fazriyan@gmail.com ABSTRACT ISPA is the main cause of infectious disease morbidity and mortality in the world.

Based on data from the Martapura 1 Health Center in 2019, there were 158 cases in 2020, namely 118 and in 2021 the number was the same, namely 118 cases. The number of children under five who suffer from ISPA has increased every year. The purpose of this study was to determine the relationship between nutritional status, exclusive breastfeeding and smoking behavior of family members with the incidence of ISPA in toddlers, to analyze the relationship between nutritional status, exclusive breastfeeding and smoking behavior of family members with the incidence of ISPA in toddlers in the working area of ??Martapura Health Center 1 in 2020. The type of research used is observational with a cross-sectional approach.

The sample in this study was 90 mothers with under-fives (47 under-fives with ISPA and 43 under-fives without ARI) which were taken using the incidental sampling technique, the type of incidental sampling allocation. 0.05) which indicates that there is a significant relationship between nutritional status (BB/U) and the incidence of ARI in children under five (? 0.000). There is also no significant relationship between exclusive breastfeeding and the incidence of ARI under five children 0.062 besides that there is no significant relationship between smoking behavior of family
